WHERE LUXURY LIVES INTELLIGENTLY

THE ROI OF SMART LIVING

SHORT-TERM RENTAL
MANAGERS

A LUXSYNC GUIDE
SMARTER LIVING. MEASURABLE VALUE.

Short-Term Rental Managers

For professional short-term-rental managers and management-company leaders

An STR manager must deliver results for two customers: the guest and the property owner. The manager ROI case therefore includes service efficiency, scalable standards, owner confidence, portfolio growth, and the cost of supporting technology across unlike properties.

The STR Manager ROI Case

Value area	What to measure	Relevant LuxSync capabilities
Management margin	Technology-related labor and vendor cost per unit	Standardized compatible foundations and Blueprints
Owner retention	Owner concerns, renewal reasons, reporting confidence	Property Pulse, documented performance and exception handling
Portfolio onboarding	Time to assess, configure, document, and train each property	Repeatable Property Profile and implementation paths
Guest service	Technology contacts, escalation rate, resolution time	Guest Ready, simplified controls, compatible products
Field operations	Dispatches, rework, after-hours interventions	Turnover, Water Watch, climate/status awareness
Portfolio scalability	Units supported per manager/operations team	Standards, roles, templates, phased rollout

Establish the Management Baseline

Track:

- active units, new-unit onboarding time, and technology assessment cost;
- management revenue and direct service cost by unit where available;
- technology-related tickets, escalations, vendor calls, and dispatches;
- owner questions, technology-related dissatisfaction, and contract-renewal themes;
- guest issue rates and resolution time;
- device and ecosystem variation across the portfolio;
- training time for internal teams, cleaners, vendors, and local contacts.

STR Manager ROI Worksheet

Input	Your value / unit	Reference method
Annual service labor recovered	_____ \$	Verified avoided hours × loaded labor cost
Annual dispatch/rework savings	_____ \$	Avoided events × fully loaded event cost
Annual onboarding efficiency	_____ \$	Verified hours avoided per new unit × units onboarded × loaded cost
Attributable owner-retention value	_____ \$	Retained contribution linked to evidenced decision factors; scenario until verified
Attributable scalable-capacity value	_____ \$	Added sustainable units × evidenced contribution, net of added support cost
Recurring and initial costs	_____ \$	Subtract implementation, platform, training, support, and replacement costs

Management-Company Decision Rules

- Segment properties by ecosystem, size, connectivity, and owner appetite before standardizing.
- Define a supported-product policy and exception process.
- Assign alert owners, after-hours escalation, battery maintenance, and device-replacement responsibility.
- Show owners measured facts, not implied guarantees.
- Keep guest privacy and platform disclosure rules inside onboarding and quality assurance.

What a LuxSync STR Manager Blueprint Can Include

- portfolio segmentation and property standards;
- supported foundation and approved capability categories;
- minimum, preferred, and premium property packages using validated products;
- Guest Ready, Turnover, Property Pulse, Water Watch, and Climate Intelligence mappings;
- operating roles, handoffs, training, and exception paths;
- owner-facing measurement framework and rollout sequence.

Important Boundaries

LuxSync does not guarantee owner retention, portfolio growth, reviews, labor savings, or management margin. Any capacity or retention value must be linked to actual operating and customer evidence. Security-related and property-awareness products do not replace emergency response, professional monitoring, code-required systems, or local property support.

Your measurement log

Record observations before and after a change. Use comparable periods, consistent units, and your own measured data. Keep estimates and scenario values clearly labeled.

Property / project: _____

Period: _____ Recorded by: _____

Phase: Baseline / Pilot / Follow-up

Record your observations

Value area	Measurement / unit	Notes / evidence
Management margin	_____ _____	_____ _____
Owner retention	_____ _____	_____ _____
Portfolio onboarding	_____ _____	_____ _____
Guest service	_____ _____	_____ _____
Field operations	_____ _____	_____ _____
Portfolio scalability	_____ _____	_____ _____

Context: occupancy, weather, schedule, or equipment changes

Compare two periods

Copy recorded values side by side. This worksheet makes no automatic ROI, savings, or payback calculation. Explain differences in context before drawing conclusions.

Period A: _____ Period B: _____

Value area	Period A / unit	Period B / unit
Management margin	_____	_____
Owner retention	_____	_____
Portfolio onboarding	_____	_____
Guest service	_____	_____
Field operations	_____	_____
Portfolio scalability	_____	_____

What changed? What needs another measurement?
