WHERE LUXURY LIVES INTELLIGENTLY

THE ROI OF SMART LIVING

SHORT-TERM RENTAL
OWNERS

A LUXSYNC GUIDE
SMARTER LIVING. MEASURABLE VALUE.

Short-Term Rental Owners

For individual and portfolio short-term-rental property owners

For an STR owner, intelligent technology should strengthen the property's net operating performance and guest experience without creating a fragile collection of disconnected devices. The owner ROI case centers on property-level income, operating costs, asset awareness, and long-term flexibility.

The STR Owner ROI Case

Value area	What to measure	Relevant LuxSync capabilities
Utility control	Energy used between stays and during unoccupied periods	Climate Intelligence, Energy Intelligence, Away
Guest arrival	Access issues, failed check-ins, owner interventions	Guest Ready, compatible smart entry and lighting
Property awareness	Leak events, temperature exceptions, doors/windows, response time	Water Watch, Property Pulse, Protect
Turnover readiness	Time spent confirming property state before arrival	Turnover, Guest Ready, remote status
Guest experience	Technology-related messages, review themes, comfort issues	Welcome, lighting, climate, entertainment, accessible controls
Owner time	Hours spent on repeatable checks and device coordination	Standardized routines, remote visibility, Blueprint guidance

Establish the Property Baseline

Collect 6-12 months where available, while accounting for seasonality:

- nights available, nights booked, average daily rate, and gross booking revenue;
- electricity, gas, water, and internet costs;
- owner time spent on access, thermostat, lighting, and troubleshooting tasks;
- guest messages and incidents related to entry, comfort, connectivity, or devices;
- turnover confirmations and emergency/extra site visits;
- water or property incidents and attributable costs;
- current platform, lock, thermostat, lighting, sensor, and SmartThings compatibility.

STR Owner ROI Worksheet

Input	Your value / unit	Reference method
Annual verified utility savings	_____ \$	Seasonally normalized baseline minus measured result
Annual owner time recovered	_____ \$	Verified hours avoided × chosen owner time value
Annual avoided intervention cost	_____ \$	Avoided trips/callouts × fully loaded cost
Attributable revenue/experience value	_____ \$	Count only evidence linked to the implementation; otherwise show as a scenario
Risk-adjusted incident value	_____ \$	Event probability × attributable avoidable cost
Annual recurring cost	_____ \$	Subtract from benefits
Initial investment	_____ \$	Validated equipment and setup cost

Owner-Focused Decision Rules

- Evaluate each property independently before assuming portfolio-wide ROI.
- Separate cash savings from time value and risk scenarios.
- Do not count the same benefit twice—for example, a saved site visit and the same recovered hour.
- Confirm that access, privacy, noise-awareness, cameras, and monitoring practices follow platform rules and applicable law.
- Prefer compatible, supportable products over a larger device count.

What a LuxSync STR Owner Blueprint Can Include

- property type, size, occupancy pattern, and remote-management profile;
- Guest Ready, Turnover, Property Pulse, Water Watch, and Climate Intelligence recommendations;
- compatible foundation and product categories;
- Essential, Elevated, and Complete investment paths;
- measurement plan for utilities, interventions, incidents, and guest experience;
- phased roadmap that can expand after results are verified.

Important Boundaries

LuxSync does not guarantee bookings, nightly rates, reviews, utility savings, insurance outcomes, or incident prevention. Property-awareness and security-related technology does not replace professional monitoring, emergency services, code-required life-safety systems, or responsible local support.

Your measurement log

Record observations before and after a change. Use comparable periods, consistent units, and your own measured data. Keep estimates and scenario values clearly labeled.

Property / project: _____

Period: _____ Recorded by: _____

Phase: Baseline / Pilot / Follow-up

Record your observations

Value area	Measurement / unit	Notes / evidence
Utility control	_____ _____	_____ _____
Guest arrival	_____ _____	_____ _____
Property awareness	_____ _____	_____ _____
Turnover readiness	_____ _____	_____ _____
Guest experience	_____ _____	_____ _____
Owner time	_____ _____	_____ _____

Context: occupancy, weather, schedule, or equipment changes

Compare two periods

Copy recorded values side by side. This worksheet makes no automatic ROI, savings, or payback calculation. Explain differences in context before drawing conclusions.

Period A: _____ Period B: _____

Value area	Period A / unit	Period B / unit
Utility control	_____	_____
Guest arrival	_____	_____
Property awareness	_____	_____
Turnover readiness	_____	_____
Guest experience	_____	_____
Owner time	_____	_____

What changed? What needs another measurement?
